

# How the Web Works

## Instructions

Download the exercise content and open the webWorksLab.docx file. Attempt as many problems as you can.

The goal is to get through all of the questions. You will have to do some research. Make sure to work with your partner. Any work you split up should be explained to the other partner, not merely copied.

There is an example app included in the folder that you’ll download. You don’t need to edit anything about this, you’ll just be running so you can practice curl commands.

Don’t forget to put your file on GitHub.
