# Agile Lab

## Overview

In this lab, you are going to take a look at Apple’s iPhone product page and review the user flow, as well as come up with some user stories Apple might have come up with when determining how to build this page.

## To Start

- Visit [Apple’s iPhone Product page](#) and review it.
- Open up a word or pages document. You will build your user flow and user stories on this document.

## User Flow

Using simple text and arrows, diagram the user flow from Apple’s home page, all the way to checking out for an iPhone. Is there more than one way to get there? If so, make sure to include that in your user flow.

Reflect on Apple’s user flow. Is it overcomplicated? Complicated, but necessarily so? Or fairly easy?

## User Stories

- Step 1: Come up with 5 user stories Apple might have come up with when determining how to build this page.
  - Ex. What user story might have prompted Apple to layout all the device options across the top of the page?
  - Ex. What user story might have prompted Apple to use large graphics with minimal text?
  - Ex. What user story might have prompted Apple to show certain accessories on the iPhone product page?
- Step 2: For each user story, create a detailed list of what features you saw on Apple’s iPhone product page that helped you come up with that user story.

Note: User Stories help create features...

Each user story should have at least one feature associated with it.

## Trello

- Step 1: Create a Trello account
- Step 2 (optional): Download the Trello desktop app
- Step 3: Create a Trello board, call it iPhone Product Page
- Step 4: Based on the features you listed above (for each user story), create a ‘card’ for each feature. In the description, share the user story associated with this feature.

Note: Use Trello and tools like it!

We are not going to use this Trello board for anything, however, we would love for you to get used to this type of a tool. We will be using a Trello board later in the course, and you will very likely want to use a Trello board in your Specialization School. Create different column such as: to-do, in-progress, and complete. Move cards around from column to column. Add due dates. Explore. Trello and other tools like it are essential to the agile process.

## Submission

To submit this lab:

1. Add your Trello board share-link to the bottom of your User Stories document.
2. Go to Github and create a new repository. (Click the little + in the upper right hand corner.)
3. Name your repository “user-stories” (or something like that).
4. Click “uploading an existing file” under the “Quick setup heading”.
5. Choose your User Stories document to upload.
6. Add “commit message” under the heading “Commit changes”. A good commit message would be something like “Adding user flow and stories.”
7. Click commit changes.
